

A New Approach, Same Great Care!

Tomorrow's better healthcare is here today!

1. What is an EMR? Electronic Medical Record (EMR) is simply a computer file that stores the same information contained in a paper medical chart.

2. What are the patient benefits of EMR?

- a. Comprehensive collection of clinical data shared within the HCA network. (Interoperability)
- b. Secure access to patient clinical data in compliance with HIPAA regulatory guidelines.
- c. Increased patient safety through accurate diagnosis, prescriptions and lab ordering/results.

3. What can you expect? You will notice your caregivers making computerized notes rather than paper notes. We believe you will see the benefits of this technology almost immediately.

We are committed to delivering high quality medical care and are continually looking for ways to improve our service.

We believe that converting from paper medical records to electronic medical records is the best step we can take to achieve our goal of excellence in patient service.

If you have any questions or concerns during this transition period, do not hesitate to discuss them with our staff. Your patience and understanding are appreciated during this transition period.

Your patience and support are appreciated. Thank you for understanding!
